

WHY USE CANOLA MAX?

Canola Max provides canola with nutrients to overcome herbicide or environmental stress to maximize early season growth. Canola Max contains boron which can become limiting in canola, reducing pollination and yield potential. Canola Max is also a great treatment following significant environmental stress events such as hail, frost, insects, or wind damage.

AgraCity Proprietary herbicide relief package

AgraCity Proprietary environmental stress package

AgraCity Proprietary plant growth promoters

APPLICATION RATES

Low Rate 0.5 L/Acre
 Recommended Rate 0.75 L/Acre
 High Rate 1.0 L/Acre

(use for stress event relief)

RECOMMENDED CROPS AND STAGE

CANOLA MAX has been specifically designed for use on canola crops during herbicide applications.

Canola: 2-6 leaf stage

BENEFITS

- Increased plant vigor & growth
- Increased nutrient uptake
- Supply of micronutrients
- Improved plant resistance to stress
- Increased metabolism and recovery from herbicide injury
- Improved flowering and pod set

TANK MIX RECOMMENDATIONS

CANOLA MAX should be added to the spray tank following the addition of all herbicides but prior to the addition of surfactants.

DO NOT use mixed with alkaline copper fungicides or inoculants. If mixing with other chemical, always preform a jar test to check product compatibility.
