STORAGE

- Do not freeze. If frozen, bring to room temperature and agitate before use.

GRAZING AND HARVEST

- Livestock may graze treated areas 7 days after application.
- Withdraw meat animals from treated areas at least 3 days prior to slaughter.
- Mature crops may be harvested 60 days after application.

MIXING INSTRUCTIONS

1. Fill the spray tank 1/2 full of water, start sprayer agitation and continue throughout mixing and application process.
2. Add any dry formulation tank mix partners
3. Add the required amount of grass weed control tank mix partner.
4. Add the required amount of Foxy then the required amount of 2,4-D Ester.
5. Add any required surfactants, complete filling of sprayer and apply.
6. If application is stopped prior to completion, re-suspend spray solution by full agitation prior to commencing spraying again.

UNDERSTANDING PERFORMANCE

- Best results will occur with temperatures between 12° C and 24° C in warm moist conditions when weeds are smaller and actively growing.
- Use higher water volumes with heavier weed pressure, larger weeds and thicker crop canopy.
- Typical symptoms (twisting of the stems) of dying weeds may not be visible for several days to 2 weeks after application, depending on growing conditions. Control of weeds may take 3-4 weeks.
- When weeds are stressed due to drought, flooding or prolonged hot or cool temperatures (less than 8 °C or more than 27° C), control can be reduced or delayed since weeds are not actively growing.
- Weed escapes may occur under prolonged stress conditions or low fertility. Do not make applications to weeds stressed longer than 20 days due to lack of moisture as unsatisfactory control can result.

Always read and follow all label precautions and directions.

*When applying tank mix combinations, always follow all label requirements for each product used in the tank mix. In cases where these requirements differ between the tank mix partner labels, the most restrictive label must be followed.
